WHO WE ARE

FMS Africa Ltd is the leading GPS Tracking solution providers for vehicles, motorcycles, Generators, boats and assets.

Our solutions provides businesses with real time monitoring, analysis and control over their assets which enables asset optimization, significant OPEX reductions and productivity maximization

FMS Africa provides high-end fleet management and security solutions for a variety of industries. The solutions include smart logistics management, fuel management , vehicle recovery, driver behaviour and more.

FMS Africa provides a robust M2M 24/7 monitoring solution. This cost-effective solution is suited to all major brands of generators. FMS Africa enables accurate fuel monitoring and theft prevention, events and alarm management, maintenance, generator diagnostics and more.

FMS AFRICA GLOBAL PRESENCE

1. Uganda
2. Kenya
3. South Sudan
4. DR Congo
5. Rwanda
6. Burundi
7. Tanzania
8. Malawi

Initially incorporated in 2010, FMS Africa is affiliated to the Galooli Group and currently has a presence in the above countries.

FLEET MANAGEMENT

Managing a fleet is extremely resource demanding as it requires monitoring over countless details. FMS Africa Fleet's solutions enable companies to achieve this easily with one connected platform. Companies can hence maintain full operational efficiency with minimal resources

KEY FEATURES

Asset Tracking & Management

Track your assets' location and status in real time, filter your display by fleets and groups, colours and region. Set geo-locations either as POI or a Geo-fence, be notified whenever the driver leaves or enters these locations.

Driver Behaviour & Identification

FMS Africa's driver behaviour module grades and compares drivers' performances. Increase your business productivity and vehicle safety with the information provided. Constant vigilance is also ensured with driver identification methods like the Dallas Keys. Any unauthorized usage of vehicles will be detected and prevented.

Fuel Monitoring

FMS Africa's unique fuel algorithm provides real fuel level data. Obtain a comprehensive breakdown of fuel cycle: consumption rate, refuelling, fuel drop events and general fuel trends. Detect irregular fuel activity and provide reports in order to stop fraud and unauthorised behaviour.

FLEET MANAGEMENT BENEFITS

Driver / Rider Safety

Monitor hazardous driving behaviour, evaluate their performances and guide them.

OPEX Reductions

Monitor fuel consumption and prevent unauthorized or irregular usage.

Green Fleet

Lighten your carbon footprint by minimizing fuel loss and wastage

GENERATOR MANAGEMENT

FMS Africa's comprehensive M2M 24/7 solution enables businesses to manage real-time operations and generators' parameters remotely. The solution streamlines work progress, ensures operational efficiency and is suitable for ALL major brands of generators.

KEY FEATURES

Fuel Monitoring & Management

Utilizing highly accurate fuel sensors and the Corona's fuel theft algorithm, users can identify fuel theft as it happens. Fuel reports can also be generated remotely to analyse trends and detect anomalies based on extremely accurate fuel data.

Generator Maintenance & Alerts

Achieve preventive maintenance as FMS Africa's solution prevents malfunctions by monitoring the generator's running hours, fuel usage, battery level, engine parameters through engine control and maintenance alerts.

GENERATOR MANAGEMENT

KEY FEATURES

Site Safety & Security

FMS Africa offers latest security solution like high quality 24/7 DVR-based CCTV surveillance system, sophisticated access control system, remote stop/activation, remote siren activation, intrusion alerts, motion detectors and panic button.

Freezer Monitoring

The Corona TR7Z combined with NFC temperature sensor, door sensor and a buzzer fits to any size freezer and indicates whether the industrial freezer temperature has risen above critical levels. Review temperature trend reports and get a comprehensive overview of any situation

GENERATOR MANAGEMENT BENEFITS

Maximize Profits

FMS Africa's solution reduces the need for physical site visits

and optimizes fuel consumption. Businesses will hence achieve significant OPEX reductions and maximize their profit margin.

Maximize Productivity

Achieve maximum productivity as generators run at their maximum capacity with minimal resources throughout the entire extent of their life cycles.
